

Fork Positioner for Forklifts

Fork Positioner for Forklifts - The fork positioner is a hydraulic device that allows the individual driving to maneuver the forklift without leaving the seat. They are constructed out of high quality materials and are designed to be able to withstand the most demanding procedures and work surroundings. Side shifting units have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate lifting and placement in a faster and more efficient way.

The only one of its kind blade pocket design can enable the person operating it to securely swing the unit's forks without any fear of damaging the positioning cylinders. This could allow the worker the alternative to either execute simultaneous or independent fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into fork positioners on existing units.
